

BOAT BUILDING

Easy welding activity

Welding

By using specialized tools welders work to join different types of metals together!

This activity focuses on welders and how their skills are essential to building different structures, such as boats!

These welding skills are essential when it comes to boats. Good welding is essential to ensure the ship does not sink. If metals are not properly welded the ship will leak!

BOAT BUILDING ACTIVITY

Instructions:

Step 1: Print or trace the template from the next page to get the base for your boat ready. You may want to decorate your boat in this step before cutting and folding.

Step 2: Cut out along the outside lines of the shape.

Step 3: Once cut, fold up each edge of your boat along the dotted lines.

Step 4: Tape or glue together the edges of the boat. In this step, you will act as the welder. Joining each side together with tape or glue is similar to what welders do in real life!
